

THE SITEMAP

The team generated this sitemap for our website. It started on the homepage wherein it serves as a welcome to our visitors. The homepage includes welcoming text and images, the recipe and the activities, and also the social media links of the site. After that, there are 4 contents that we prepared for the site visitor. First is the Trending page, which will have the main purpose of the site to present the activities happened during the lockdown. Under that are the Recipes and Activities. In Recipes, it will present different do-it-yourself recipes that everyone enjoyed making in last year's quarantine period. After that is the Activities, this page will have different activities which made everyone entertained. The next page would be the Timeline. This will present significant dates that happened last year. This includes the time when the first case of Covid19 was known here in the Philippines. Also dates such as the time when the President announced the termination of classes due to the rising of cases. This page will sum up all the important events. The third is the Search, this is just simply a search icon and search function. This will be located at the homepage for easy access to the contents. The search button will dive into the database and return the contents which user wishes to find. Lastly, the About Us page, this page will have the details of the website, author, and social media accounts. Furthermore, this will give the idea to the website visitor whoever are the persons behind of the website. This will give credit to the proper owners of the content.

This is not yet final for this is just the first sprint. New ideas are welcome for the betterment of the website.
